/templates
daily-log.md
event.md
arc.md
project.md
witness.md
storymap-lane.md
```

Core Concepts:

- daily-log: chronological narrative of each day.
- event: specific time-bounded occurrence.
- arc: longer-running storyline or season.
- project: goal-oriented work unit with deliverables.
- witness: any asset that 'witnesses' reality (photo, video, audio, doc).
- storymap-lane: defines a lane (family, ministry, business, politics, etc.).

Data Flow (Phase 0):

1. You run `servetus_cli.py` to create a daily log.
2. Logs are stored in `01-daily-logs/`.
3. From logs, you or future Servetus code derive events and arcs.

4. Witness notes point back to raw assets stored in Nextcloud.

5. StoryMap will later visualize arcs, events, and witnesses.

This PDF is just a high-level reference for how the starter kit is structured.
